

A question was submitted by email directly seeking clarity on installation and integration. As stated, "With some limited support, PCTV intends to implement the integration with in-house staff."

PCTV is capable of most PCTV MC integration, installations, and implementation and will be installing the MC automation. The limited support statement above is in reference to a possible solution that differs from the basic concept outlined in the support document, Current MC systems.pdf. That is, if replacing with similar concepts, PCTV will complete the installation. If your proposal is vastly different with unconventional products, PCTV may have questions and require guidance, however PCTV will still complete the installation.
